

DATA ANALYTICS **PROJECT**

PROJECT PEER REVIEW **FEEDBACK ACKNOWLEDGEMENT REPORT**

COURSE INSTRUCTOR: MR M.S ANAND

TEAM NAME: THE AGGREGATORS

PEER TEAM NAME: DATA RANGERS

We presented our progress in the form of a documented report over a virtual meeting in the presence of all team members which has already been submitted.

Since our project focuses on analytics instead of predictions, our problem statement definition and clarity was immediately not picked up by our peers and we broke it down to make it as clear as possible. Based on the suggestion, understandability was given the highest priority.

Our final report ensures that the implementation is followed by textual explanation at all possible instances right from the problem statement definition to the conclusion.

Findings from the initial EDA were displayed to provide support to our well found claims.

We were also suggested to broaden our study and provide further comparisons that would be helpful in the real world scenario as our problem deals with a very vital global issue. Hence, further inclusion in ensured to improve on the same.
